

# AG Cover

*100% results  
in algae control* | *PE 0.50 mm version.  
460 gr/m<sup>2</sup>.*

- Water surface is protected from sunlight and dirt.
- Minimal evaporation.
- Double-sided black PE material.
- Excellent floating capacity.
- Easy to clean.
- Easy to install, can be installed on every water level.

The AG cover is less wind resistant than an LP deck. In strong wind there is a risk that the AG cover will be blown on a heap or even out of the silo. Due to the simple implementation, this can be quickly reset in most cases. This is not covered by the warranty. In wind-sensitive locations we recommend to apply the more wind-resistant LP deck.
